- Maintain plans.
- Crisis Communication.

and much much more.....

Designed to teach you BCM knowledge and skill.

Who should attend?

- IT Managers
- IT Governance and Compliance Officers
- IT Process Owners (Networks, OPS, APPS, Service, Finance)
- Disaster Recovery Specialists
- Backup and Storage Specialist
- IT Procurement Officers

Policy, Culture and Program Management

The successful establishment of a Business Continuity Management (BCM) program within the organization's culture is dependent upon its integration with the organization's strategic, and day-to-day, management and alignment with its business priorities. This section examines those integration strategies.

Understanding the Organization

General principles, business impact analysis, estimating recovery requirements, estimating threats (risk assessment). Although all areas of the business continuity plan are important, the steps in this section set the conditions for the entire effort and are critical.

Determining BCM Strategies

Determining Business Continuity strategy looks at the general issues of ensuring the protection of the ability of the organization to deliver a product or service within its Business Continuity program. The following section describes the tactics available for ensuring the continuity and the activities which support the delivery of those products or services.

Developing and Implementing a BCM Response

The aim of the various plan(s) covered in this stage is to identify, as far as possible, the actions that are necessary and the resources which are needed to enable the organization to manage an interruption, whatever its cause.

Exercising, Maintenance and Review

A Business Continuity Management (BCM) capability cannot be considered reliable until it has been exercised. Since it is rarely possible to undertake an exercise for the whole organization at one time, a planned exercise program is required to ensure that all aspects of the plans and personnel have been exercised over a period of time. This section examines the various ways a BCM capability can be exercised.
